

How do you fit the world
into your living room?

Meet the Entertainment PC

Entertainment PCs are a new class of PC designed for digital media and online entertainment. Their goal is to deliver a superior user experience of photos, movies, games and television as well as easy access to the world of online entertainment options. Intel® Viiv™ technology is designed to power the Entertainment PC.

Intel® Viiv™ technology¹ has arrived.

Our entertainment choices are exceptional.
We are now immersed in a world of digital content.

So perhaps it's no surprise that many people have wondered, "If all my media content has gone digital, isn't it about time my entertainment experience made the most of it?"

The answer is yes, it's time.
The answer is Intel® Viiv™ technology.

Get to wow. Now.

Home entertainment as we know it is about to change. And Intel® Viiv™ technology lives at the heart of the reason why. A new set of PC technologies from Intel designed to make the most of the digital media experience at home, Intel Viiv technology gives people the power to create their own entertainment experience based on their entertainment PC — and enjoy the content they like. Like *that*.

The options are awesome. And they go on and on.

Intel Viiv technology puts a new level of control at people's fingertips. From games, movies and music to photos, television² and more, Intel Viiv technology allows people to access the entertainment choices they seek— on the type of PC they prefer. Of course, they can also easily switch from one kind of content to the next. They can dive into their own personal collections or expand their horizons with verified services from an array of providers.

Call the shots from the couch.

With Intel Viiv technology, people can share digital media with friends and family from the comfort of their couch. With a simple user interface and remote control³, the inter-action is similar to a TV or DVD player. Intel Viiv technology also lets multiple users access their entertainment PC at the same time with a home network and digital media adapter, enabling the great entertainment experience to go around.

Enjoyment made easy.

Who said the experience of digital entertainment had to be daunting? Intel Viiv technology helps keep it simple. Intel Viiv technology gives people the ability to navigate their digital libraries to find and enjoy what they want. It lets them easily sync their portable, handheld devices with the content they keep on their entertainment PC to take with them on the go. And, with Intel® Quick Resume Technology Drivers activated, once they've initially booted, they can turn their PC on and off in an instant, much like a TV.

Be in charge.

Users can do more than download the media they want, they also have the power to customize their own entertainment experience. Think about being able to create a playlist with a mix of music videos by your favorite artists, clips from the newsroom so you can keep up with the latest, and even a few of your favorite TV shows thrown in². Don't like the music on that game you've downloaded? No problem — just sub in your own pulse-pounding mix. Want to share a slideshow of your wedding with friends? Why not create your own soundtrack to match the mood? Intel Viiv technology takes personalized entertainment to a whole new level.

A new kind of PC designed to bring the world to its senses.

A ground-breaking vision of home entertainment has inspired an innovative class of PCs with a new sense of purpose. Intel® Viiv™ technology makes the most of the exciting new entertainment PC experience from the inside out.

Processing Powerhouse

Inside every Intel Viiv technology-enabled PC you'll find a powerful Intel dual-core processor. It's the powerhouse behind the entertainment PC's ability to run multiple applications at once – and provide a satisfying, smooth-running digital media experience. It's the kind of might that allows one family member to sync a portable media player or record a TV show², while another watches a downloaded premium movie or plays a game.

Supercharging the Senses

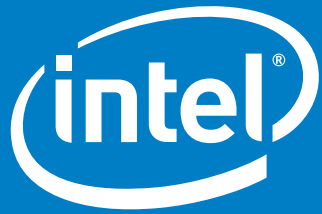

In addition to numerous options, Intel Viiv technology also enables a superb sensory experience. It supports up to 7.1 surround sound for mind-blowing audio as well as the download and playback of high-definition movies and videos for incredible images. It's the home theater-class experience that aficionados are after.

On the outside, Intel Viiv technology-based PCs come in a variety of shapes and sizes. For the traditionalist, tower-based PCs remain an option as always. For others, DVD-like PCs make a different style statement.

Intel® Viiv™ technology is more than the sum of its parts. But the parts are exciting, too.

Dual-core processor	Allows people to perform multiple tasks simultaneously, and allows multiple people to enjoy content on the PC at the same time. Provides the performance and threading optimization to power digital home usages.
Intel® Express chipset Intel® High Definition Audio High Definition Video	Home theater quality audio includes support for up to 7.1 surround sound capabilities and stunning high definition video.
Remote control (optional - may be sold separately)	Allows easy navigation through the menu and options.
10' User Interface - Windows® Media Center	Enables users to enjoy content, services and applications on the PC while sitting comfortably in their favorite place.
Intel® Quick Resume Technology Drivers	After initial boot and when activated, turns the PC on and off instantly (like a DVD or CD player). Provides continuous access for remote users to local and internet connections. Allows scheduled background activity to occur without user intervention.
Access to Intel verified services and applications	Endless entertainment options delivered through the Internet that the user can control, personalize and enjoy.
